

## Our faithful users testimonials

### Testimony #1 (Ontario Canada)

Hello Everyone,

Its been a while since I posted an entry on the blog, but I have a great one for you today!

Brigitte Veith has submitted a testimony of how the Metatron NLS Scanner helped her eye sight :) Read it and leave us any comments. Brigitte is our Canadian distributor so she's been working with the Metatron NLS Scanner for a little while now.

"I wore glasses for the last 9 years.. tri focals with a muscle corrector.. I started taking Nuralgia patho, optic nerve neuritis patho, crocus sativus homeo, passive rabies vacc. angiotensin Bio, trichinella spralis, Micro. three weeks later I was out for dinner with my girlfriend...took my glasses when I arrived and chatted up a storm for 4 1/2 hours( we have not seen each other in a while) and realized I did not have a tension headached... which would normally happen within minutes of not wearing my glasses. I have not worn glasses for six weeks and no headache. Yippy...."

-Brigitte

## Testimony #2 (Phillipines)

I am a chemical engineer by profession and had previously been in the Chemical Industry for many years. But the last 5 years, I am more in the Wellness Industry.

I believed the Metatron Hunter NLS Scanner is a very useful and non-invasive diagnostic tools for the Wellness Industry and I supposed it is also a good complimentary tool for the Medical Industry if the Medical Association are not biased. I can recall a young lady who was diagnosed with invasive ductile carcinoma of the breast. She was advised to take out the whole breast. When I scanned her with the Metatron Hunter NLS Scanner, there was no indication of malignancy, only mastopathy was detected. The tumor markers CA15-3 as tested by MetatronHunter NLS Scanner biochemical homeostasis analysis indicated a value of 5. During the operation, the doctor did not take out the whole breast because it was found out that tumor was not as bad as first diagnosed. Upon subsequent test again, it was confirmed that the tumor was not malignant. It seem Metatron Hunter NLS Scanner was correct and that the lab test regarding carcinoma was not correct.

Cruz Manila, Philippines.

### **Testimony #3 (London, England)**

I have personally benefited immensely from this wonderful machine in assessing the health of hundreds of people including friends of mine, some of whom are top medical doctors in both Europe and Africa. In all these instances the results were amazing, with about 99% confirmation of their previous health diagnosis.

The device is an unusual biomedical device outside of the current medical paradigm. It is based on 20 years of basic research done by a number of Scientists who worked out, on normal individuals, patterns of frequency responses that correspond to particular organs. Also, they were able to work out what the normal frequency response would be for any particular age of either male or female subjects of each organ.

The device is used for assessing organ function and not structure. Therefore it is not like an MRI, CT or an Ultrasound scan. It is specifically measuring the magnetic Metatron Hunter NLS Scanner potential of cells, tissues and organs.

I highly recommend this non-invasive and portable high-tech device to all health professionals.

Michael Osei Kissi (Diagnostic radiology)
